

## Table of Panormia MSS

This is a very summary list. An asterisk indicates that the book has been studied for this project directly, either physically or in microfilm. The rest of the descriptions come from the published catalogues, from the studies of G. Fransen, B. Brasington, P. Brommer and C. Märtl and others listed in the bibliography, or from information supplied by colleagues. These are not noted for each case. The further references are highly selective. Those mss given a siglum are cited in that form in the notes. Dates of mss are usually taken from the literature, even when startlingly inconsistent, unless the ms has actually been seen, and are not much better then. Earlier locations are not ultimate provenances. Literature means only refs from which the entry comes. The bibliography of each ms is almost infinitely extensible. Under content, the occurrence of **add./adds** in bold indicates that there is a summary list of material at the beginning and end in the file pan.end, and of material in mid-text in conspectus
